EXPLORING STBBIs AND STIGMA
An introductory workshop for health and social service providers
In April 2014, the Canadian Public Health Association (CPHA) launched the project *Impacting attitudes and values: Engaging health professionals to decrease stigma and discrimination and improve sexually transmitted and blood-borne infection (STBBI) prevention*. Funded by the Public Health Agency of Canada, this project aims to enhance the prevention of STBBIs and reduce the associated stigma and discrimination by developing capacity building resources for health and social service providers.

As part of this project and in collaboration with the Calgary Sexual Health Centre (CSHC), CPHA developed a suite of professional development workshops that were pilot tested in several Canadian cities with a diverse group of frontline service providers.

The views expressed herein do not necessarily represent the views of the Public Health Agency of Canada.
EXPLORING SEXUALLY TRANSMITTED AND BLOOD-BORNE INFECTIONS (STBBIS) AND STIGMA

BY THE END OF THIS WORKSHOP, YOU WILL:

- increase your knowledge of the various forms of stigma and the factors that contribute to STBBI-related stigma;
- increase your ability to self-reflect on personal values and beliefs related to STBBIs, sexuality and substance use;
- enhance your comfort in discussing STBBIs, sexuality and substance use; and
- increase your knowledge of tools and strategies to create safer and more inclusive services.

WORKSHOP AGENDA

- **Module 1**: Introduction
- **Module 2**: Exploring stigma and the factors that contribute to stigma
- **Module 3**: Strategies to reduce stigma and discuss sexual health, substance use and STBBIs
- **Module 4**: Strategies to reduce organizational stigma and create more inclusive and safer services
- **Module 5**: Closing

What would you like to get out of this workshop?
Sexual health requires a positive and respectful approach to sexuality and sexual relationships. Sexual health is a state of physical, emotional, mental and social well-being in relation to sexuality; it is not merely the absence of disease, dysfunction or infirmity. Sexual health requires a positive and respectful approach to sexuality and sexual relationships, as well as the possibility of having pleasurable and safe sexual experiences, free of coercion, discrimination and violence. For sexual health to be attained and maintained, the sexual rights of all persons must be respected, protected and fulfilled.

Sexual rights embrace human rights that are already recognized in national laws, international human rights documents and other consensus statements. They include the right of all persons, free of coercion, discrimination and violence, to:

- the highest attainable standard of sexual health, including access to sexual and reproductive health care services
- seek, receive and impart information related to sexuality
- sexuality education
- respect for bodily integrity
- choose their partner
- decide to be sexually active or not
- consensual sexual relations
- consensual marriage
- decide whether or not, and when, to have children
- pursue a satisfying, safe and pleasurable sexual life

The responsible exercise of human rights requires that all persons respect the rights of others.

Sex-positivity

Adopting a sex-positive approach means respecting the diversity of human sexuality and talking with your clients openly and without judgement about their sexuality. A sex-positive approach respects the sexual rights of all persons, yet also acknowledges that not all persons have learned about or experienced sexuality in a positive and affirming way.

Harm reduction

Harm reduction encompasses policies, strategies and services which aim to assist people who use substances to live safer and healthier lives. Harm reduction recognizes that people use substances for many reasons; reduction of substance use and/or abstinence is not required in order to receive respect, compassion or services. Adoption of harm reduction strategies, policies and services can have many benefits for people who use substances, including improved prevention of STBBIs, decreased overdoses, increased capacity for self-care and increased stability. Example harm reduction strategies to discuss with clients include: use of barrier methods during sexual activity, use of sterile needles, not using substances when alone, etc.

Trauma- and violence-informed care (TVIC)

Trauma-informed care (TIC) focuses on creating environments where clients do not experience further traumatization or re-traumatization and where they can make decisions about their treatment needs at a pace that feels safe to them. TVIC expands on the concept of TIC to acknowledge the broader social and structural conditions that impact health, including, but not limited to, institutional policies and practices. Talking about sexuality and substance use can be difficult; using a TVIC approach can help to ensure that the broader structural and social conditions are acknowledged and that organizational policies and practices as well as provider practices do not contribute to re-traumatization. Example TVIC strategies include acknowledging the effects of historical and structural conditions, seeking service user input about safe and inclusive strategies, encouraging service user empowerment in relation to treatment options and adoption of harm reduction strategies, and implementing policies and processes that allow for flexibility and encourage shared decision-making.

Social determinants of health approach

Various structural and social conditions, such as income, housing, social inclusion, employment and education, can impact your clients’ health and ability to adopt and maintain STBBI prevention strategies. When discussing sexual health and substance use, it is important to ask your clients about the structural and social conditions that may be impacting their health and to be aware of local resources and referrals, as needed.

ACTIVITY: WHAT DID YOU DO ON THE WEEKEND?

ACTIVITY: WHERE DID YOU FIRST LEARN ABOUT SEX?
STIGMA - BRAINSTORM ACTIVITY

What is stigma?

Where do we see stigma?

What is the impact of stigma on our clients?
STIGMA DEFINED

**Perceived stigma:** awareness of negative societal attitudes, fear of discrimination and feelings of shame. ⁸

**Internalized stigma:** an individual's acceptance of negative beliefs, views and feelings towards themselves and the stigmatized group they belong to. ⁸

**Enacted stigma:** encompasses acts of discrimination, such as exclusion or acts of physical or emotional abuse (towards an individual's real or perceived identity or membership to a stigmatized group). ⁸, ⁹

**Layered or compounded stigma:** refers to a person holding more than one stigmatized identity (e.g., HIV positive serostatus, sexual orientation, race, ethnicity). ⁸

**Institutional or structural stigma:** stigmatisation of a group of people through the implementation of policy and procedures. ¹⁰

Notes:

---

STIGMA DEFINED

Levels at which stigma may exist and be confronted:
- Policy/legal
- Institutional
- Community
- Interpersonal
- Individual

Potential impacts of STBBI-related stigma:
- Adoption of unhealthy behaviours
- Fear of disclosure
- Limited uptake of available STBBI-related services
- Inappropriate planning and implementation of STBBI prevention and support programs

Adapted from:
ACTIVITY: STIGMA CASE SCENARIO

Read the case scenario that has been provided to you. Take some time to identify the different types of stigma and to brainstorm some potential solutions to address the stigma found in this scenario.

ASSUMPTIONS

What are some common assumptions or beliefs we might have about the people who use our services?

How might these assumptions or beliefs impact our engagement with clients? How might they impact the way services are organized and delivered?

What are some assumptions to avoid?
STRATEGIES TO DISCUSS SEXUAL HEALTH, SUBSTANCE USE AND STBBIS

Use this four-step model to respond to challenging questions or scenarios.

1. CHECK-IN

During the check-in, take a moment to consider your initial reactions, values, and beliefs. This is also an opportunity to consider what you may be communicating to the client through your body language. If you are feeling conflicted between your personal values and what the service user is expressing, consider your ethical code of practice.

2. AFFIRM

Affirming is very important as it allows the client to know that you are an open, welcoming and safe person. Our immediate responses to questions can leave lasting impressions with clients that can either build rapport or create mistrust. Examples include:

“Thank you for telling me this.”
“This is a really common question.”
“A lot of people worry about this.”

3. CLARIFY

While clarifying, you may need to respond to the client’s question or issue with a further question. Clarify what the client already knows and exactly what they need to know. This can be a very important step in building an open relationship. Asking your clients what they know communicates that you want to listen to them and recognizes that they are the experts in their own lives. Examples include:

“What have you heard about________?”
“It sounds like you are asking about________.”

4. ANSWER

Provide the facts, and keep the response short and simple. Be aware of your own values and beliefs and make sure that you do not communicate these through your response. After you provide a response, check-in with your client to see how they are feeling and whether they require more information, support or referrals.
CREATING SAFER, MORE INCLUSIVE SERVICES

Reducing stigma and discrimination requires a multifaceted approach. Stigma and discrimination arise from the attitudes, values, beliefs and practices of individuals as well as from the policies, procedures, culture and environment of service organizations.

Consider what clients might see, hear or feel when they access your services. What changes could contribute to safer, more inclusive services?

Notes:
What are some indicators within your workplace that would signify that it is an inclusive space for all people?

__________________________________________________________________________________________________________________________________________

__________________________________________________________________________________________________________________________________________

__________________________________________________________________________________________________________________________________________

What are some indicators that would signify barriers for service, or that might make people feel unsafe?

__________________________________________________________________________________________________________________________________________

__________________________________________________________________________________________________________________________________________

__________________________________________________________________________________________________________________________________________

What changes could be made?

__________________________________________________________________________________________________________________________________________

__________________________________________________________________________________________________________________________________________

__________________________________________________________________________________________________________________________________________

The physical space of an organization is often the first indication of whether services are truly safe and inclusive spaces. There are many small changes that can be made by way of posters, signage, pamphlets, artwork and magazines to indicate that services are accepting of all persons.
HEAR

What do people hear within a safe space?

Is the language used within your workplace inclusive and respectful?

Is there space for private conversations?

The language of service providers, administrators, forms and policies is instrumental in the construction of a safe space. Language sends a strong message to existing and prospective clients about your organization’s attitudes and beliefs related to sexual and gender diversity, sexuality, culture, substance use, harm reduction, etc.
FEEL

Are services provided in a way that is considerate of the impacts of stigma?

Are the unique experiences of individuals honoured and recognized?

How do people feel within these spaces?

How do we know how clients are feeling?

It is imperative that organizations create a feeling amongst clients that their diverse experiences, beliefs, and identities are heard, acknowledged, and respected. Central to this is the implementation of mechanisms for clients to voice their concerns and share their thoughts on service delivery and improvement.
ORGANIZATIONAL ASSESSMENT TOOL
FOR STBBIS AND STIGMA

CANADIAN PUBLIC HEALTH ASSOCIATION, 2017

THE TOOL WILL HELP ORGANIZATIONS TO:

- Identify their strengths and challenges related to stigma and discrimination.
- Increase awareness of organizational issues (e.g., policies, procedures, culture and environment) that create stigmatizing and/or discriminatory experiences for clients.
- Develop strategies to decrease stigma and discrimination and create safer and more supportive environments.

This assessment tool is suitable for any health or social service organization, including clinics that specialize in sexual health, harm reduction or STBBI services, as well as organizations that provide a broad range of services.
**GLOSSARY**

**ALLY:** A person who is actively supportive of LGBTQ+ people and their rights. Allies may be gay, straight, transgender, queer, two-spirit, etc.

**ASEXUAL:** A person whose attraction to others does not include sexuality.

**BISEXUAL:** A person who is physically and emotionally attracted to their own gender and other genders.

**BLOOD-BORNE INFECTION:** An infection transmitted by direct blood contact from one individual to another through injured skin or a mucous membrane, or transmitted through substance use and sexual contact (e.g., hepatitis B and C, HIV).

**CISGENDER:** A person whose gender identity is the same as the sex they were assigned at birth.

**CISNORMATIVITY:** The assumption that all people are cisgender or that those assigned male at birth grow up to be men and those assigned female at birth grow up to be women. It may also refer to the oppression experienced by transgender people in a society that represents cisgender people as dominant, normal and superior.

**DISCRIMINATION:** Unjust treatment based on an individual belonging or perceived to be belonging to a traditionally marginalized social group (e.g., by race, gender, orientation, etc.).

**EQUITY/EQUITABLE:** Equity means fairness. Equity in health means that peoples’ needs guide the distribution of opportunities for well-being. Equity in health is not the same as equality in health status. Inequalities in health status between individuals and populations are inevitable consequences of genetic differences and various social and economic conditions, or a result of personal lifestyle choices. Inequities occur as a consequence of differences in opportunity, which result, for example in unequal access to health services, nutritious food or adequate housing. In such cases, inequalities in health status arise as a consequence of inequities in opportunities in life (Public Health Agency of Canada, 2007).

**GAY:** A man who is physically and emotionally attracted to other men. Some women attracted to women may also identify as gay.

**GAY-STRAIGHT ALLIANCE (GSA):** Student-run organizations found in some K-12 schools and universities that create safe and supportive spaces for LGBTQ+ individuals and allies.

**GENDER EXPRESSION:** The way people communicate their gender identity to others by how they dress, act and/or refer to themselves.

**GENDER IDENTITY:** A person’s internal sense of being a woman or man, or a combination of both, or neither.

**GENDER NON-BINARY/GENDERQUEER:** Terms for a person whose gender identity is neither woman nor man.

**GENDER ROLES:** Socially constructed and culturally behavioural norms, such as communication styles, careers and family roles, that are often expected of people based on their assigned sex (Canadian AIDS Society, 2015).
**HETERONORMATIVITY:** The assumption or belief that every person is heterosexual until proven otherwise, and by default treating individuals as if they would be in a relationship with somebody of the opposite gender.

**HOMOPHOBIA/TRANSPHOBIA:** An irrational hatred of people who are, or are perceived to be LGBTQ. Often exhibited by prejudice, discrimination, intimidation or acts of violence.

**INTERSEX:** A general term used to describe people who are born with reproductive or sexual anatomy that does not fit the typical definitions of female or male.

**LESBIAN:** A woman who is physically and emotionally attracted to women.

**LGBTQ:** An acronym to describe the following identities: Lesbian, Gay, Bisexual, Transgender and Queer.

**NALOXONE:** A medication that reverses the effect of overdose from opioids. Peer administered naloxone programs train people in the community to administer naloxone if they witness an overdose.

**NEEDLE EXCHANGE PROGRAMS:** This is an evidence-based program to prevent the transmission of STBBIs. People can bring in needles and other paraphernalia that they have used for injecting substances and receive sterile injecting equipment. This is typically offered in a setting where various other psychosocial supports or referrals are available.

**ORIENTATION:** A person’s identity in relation to the gender they are attracted to.

**OPIOID DEPENDENCY PROGRAM:** This is a program for individuals that would like to stop using opiate-based substances. People receive a prescription of methadone or Suboxone® maintenance treatment in an outpatient setting. As part of these programs, people may engage in a wide variety of psychosocial supports to address substance use.

**PANSEXUAL:** A person who is physically and emotionally attracted to people of any gender.

**QUEER:** Historically used as a negative term for homosexuality and is still often used as a derogatory term against LGBTQ people. Many LGBTQ people and communities have reclaimed the word and use it in a positive way to refer to themselves and aspects of their identity.

**QUESTIONING:** A person who is unsure of their sexual orientation or gender identity and experiencing a process of self-discovery.

**SAFER INHALATION EQUIPMENT (ALSO KNOWN AS SAFER CRACK PIPE PROGRAMS):** Programs where people who inhale substances are provided with new inhalation equipment such as pipes to reduce and prevent the transmission of hepatitis C.

**SEX:** The category someone is assigned at birth based on their physical body parts and biology.

**SEXUALLY TRANSMITTED INFECTION (STI):** An infection passed from one person to another through sexual activity, including vaginal, oral or anal sex as well as genital skin-to-skin contact. STIs are grouped into three categories: viral infections (e.g., genital herpes, human immunodeficiency virus (HIV), hepatitis B), bacterial infections (e.g., chlamydia, gonorrhea and syphilis) and parasitic/fungal infections (e.g., trichomoniasis, pubic lice, yeast infection).

**NOTE:** The term sexually transmitted disease is no longer used.
SOCIAL DETERMINANTS OF HEALTH (SDH): The social and economic factors that influence people’s health. These are apparent in the living and working conditions that people experience every day. The SDH influence health in many positive and negative ways. Extreme differences in income and wealth, for example, have negative health consequences for those who are living in poverty and these effects are magnified when these people are congregated in poor regions. In contrast, those who are well-off and living in well-off regions have better overall health.

STRAIGHT: A person who is attracted to people of the opposite sex or gender to their own.

SUPERVISED INJECTION SITE: Evidence-based health care settings where people who inject substances can use their own personally acquired illicit substances under the supervision of nurses, social workers and other medical staff and where people can access clean syringes, needles and swabs, and safely dispose used needles. People can also receive health care, counseling and referral to social, health and substance use treatment services (adapted from Health Canada, 2008).

TRANS/TRANSGENDER: People whose gender identity, gender expression or behavior does not conform to that typically associated with the sex to which they were assigned at birth.

TWO-SPIRIT: A spiritual identity for some FNMI (First Nations, Metis, Inuit) people. Implies the embodiment of both masculine and feminine spiritual qualities within the same body. Note that this term is not used in all FNMI communities.

UNIVERSAL PRECAUTIONS: The practice of avoiding contact with all bodily fluids through gloves, face masks and a variety of other barriers, whether the health status of said bodily fluid is known or not.
